Software Engineer III — Java — Spring Boot — Microservices — Kafka — AWS — Distributed Systems —
Payment & Billing

TECHNICAL SKILLS

Languages: Java (8/11/17), SQL

Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate

Streaming & Messaging: Apache Kafka, Event-driven Architecture

Cloud & DevOps: AWS (EC2, S3, SNS/SQS, CloudWatch), Docker, Monitoring

Databases: PostgreSQL, MySQL, MongoDB, Redis

Architecture: Microservices, RESTful APIs, Distributed Systems, System Design

EXPERIENCE

Software Engineer III

May 2025 – Present

eBay (via ZeMoSo)

Bengaluru, India

- Architected distributed billing microservices handling 500K+ transactions daily with P99 latency of 120ms and zero duplicate-charge incidents by implementing idempotent request handlers and double-entry accounting ledger with ACID guarantees.
- Reduced transaction processing latency by 40% (2.5s → 1.5s P99) by implementing Redis caching layer and optimizing Hibernate query N+1 patterns across payment settlement workflows.
- Designed event-driven Kafka pipeline processing 10K QPS with guaranteed delivery and automatic retry logic, eliminating manual reconciliation delays and reducing financial discrepancies by 95%.
- Mentored 2 junior engineers on distributed systems patterns and transactional consistency; established design review cadence for 4 microservices, contributing to 1 SDE1 promotion.

Software Engineer

Sep 2022 – Apr 2025

HCLTech (Citi Payment Express)

Pune, India

- Designed and deployed RESTful APIs serving 100M+ users with 99.95% uptime SLA and sub-200ms P95 latency, supporting 50K QPS across 8 microservices with API versioning and OpenAPI documentation.
- Architected Kafka-based event-driven architecture processing 500M+ transactions monthly with idempotent handling, reducing failed payment retries by 35% and eliminating customer-facing transaction failures.
- Optimized PostgreSQL performance through index optimization and connection pooling, reducing transaction latency by 35% (3.2s → 2.1s P95) across payment workflows.
- Owned distributed ledger service storing 10M+ financial records with eventual consistency guarantees; led code reviews and mentored 3 junior developers with 2 promoted to senior levels.
- On-call rotation owner for payment processing service; diagnosed and resolved 3 critical production incidents (rate limiting spike, connection pool exhaustion, JPA deadlock), reducing MTTR by 40% through postmortem-driven preventive monitoring.

PROJECTS

JobTracker - Automated Job Aggregation System

2025

Personal Project | GitHub

- Architected distributed job aggregation system in Java Spring Boot integrating 10+ company career APIs with platform-agnostic handlers, enabling new providers with minimal code duplication.
- Implemented weighted skill matching engine with NLP-based JD parsing achieving 60–90% accuracy; integrated Claude AI API for semantic analysis and automated ATS-optimized resume tailoring per job.
- Engineered real-time Telegram notification system delivering job alerts within 15 minutes of posting with match scores; deployed on Render with MongoDB Atlas and CI/CD pipeline handling concurrent requests with rate limiting.

CERTIFICATIONS

AWS Certified Developer – Associate (2026) | Microsoft GitHub Copilot Certification (2026)

EDUCATION

B.Tech in Computer Science and Engineering

2018 – 2022

I.K. Gujral Punjab Technical University

Punjab, India
